Summary: [Bug] Displayed "Incorrect credentials" instead of "User account does not exist" after trying to login using credentials that do not exist in the system

Priority: Low
Severity: Minor

Precondition
- Accessible test environment
- User account is not logged-in

Test Data
- Account credentials that do not exist in the system
    - User: Administrator
    - Password: admin123
- Environment: Test Environment
- Release Version: 5.8
- Browser: Microsoft Edge Version 143.0.3650.139 (Official build) (64-bit)

Steps to replicate
1. Navigate to the login page
2. encode username = Administrators
3. encode password = admin123
4. click Login
5. Verify and validate the error message

Expected Result
- Should display "User account does not exist" error message

Actual Result
- Displayed "Invalid credentials"
